Project Name	Credit Card Approval Prediction System
Maximum Marks	2 Marks

Customer Problem Statement Template

A well-articulated customer problem statement allows the team to find the ideal solution for the challenges customers face. Two perspectives are captured below: the credit card applicant, and the bank's credit risk analyst who relies on the Credit Card Approval Prediction System's predictions.

Problem Statements

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a working adult applying for a credit card with a stable but modest income and a short credit history	get approved for a credit card quickly and use it responsibly to build a financial track record	the bank's manual review takes days and I don't know what factors will help or hurt my application	approval decisions rely on scattered records (income, employment, past credit behaviour) that aren't combined into one clear, fast assessment	Anxious and Uncertain
PS-2	a credit risk analyst at a bank reviewing hundreds of card applications every week	approve creditworthy applicants quickly while minimizing the number of risky accounts that later default	manual, rule-of-thumb review is slow, inconsistent between reviewers, and doesn't fully use the applicant's historical credit-repayment data	there is no single, data-driven model that scores applicants consistently using their demographic, financial and credit-history features together	Overwhelmed and Under Pressure
